

The Violet system provides maximum cover for walkways in schools and medical facilities. Designed to protect from snow, rain and sun, the canopy is constructed of extruded aluminum. Its attractive design completes the building's image optimally. This canopy is freestanding and poles are typically attached to a concrete foundation.

- Detailed shop drawings and submittals provided by Alumtec for each project.
- Project covered by Alumtec Architectural, and assisted throughout entire process beginning with sales, project management, shop drawings, all through delivery coordination and installation.
